The subject however of mechanical efficiency is dealt with below. The isometric contraction. The actual shortening of a muscle is a complex process, involving a variety of physical and mechanical factors, in addition to the purely physiological ones concerned with the extent and course of the response. In order to eliminate these extraneous factors it is advisable, where possible, to deal with rigidly isometric contractions. Physiological literature is burdened with observations which depend rather on the properties of levers than on those of muscles, and it is possible to avoid any mechanical complication by employing an isometric spring-myograph, with good sensitivity and high natural frequency. (See (23 p. 115), (65, p. 245), (10).) The effects of temperature. The rate of development of the isometric twitch has a high temperature coefficient, viz., about 2.5 for 10C., and its rate of disappearance...
