

A General Formula for the Uniform Flow of Water in Rivers and Other Channels (Paperback)

Filesize: 3.23 MB

Reviews

An exceptional ebook along with the typeface applied was intriguing to read. It is definitely simplistic but unexpected situations within the fifty percent of the publication. You are going to like just how the writer publish this pdf.

(Adeline O'Kon)

A GENERAL FORMULA FOR THE UNIFORM FLOW OF WATER IN RIVERS AND OTHER CHANNELS (PAPERBACK)

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1889 Excerpt: .a o o trifling want of accuracy in its determination would involve a considerable error in the value of m.--Trans. closely to the point (No. 9) representing the least slope, we determined its ordinate to be $y = 487$. m But since $y = y_l + 1F$ an(i since $y_l = 60$ in this case, we have, for the distance from the assumed point to the horizontal tn asymptote, $-487-60 = 427$. The quantities $5 = .0000016\$$ and $y = 427$ form the sides of a rectangle, the area of which is equal to the constant of the hyperbola, and the value of which is thus found to be $m = 427 \times .00000363 = .00155$. 29. Determination of the coefficient n of roughness of wet perimeter. Having thus determined the constants, a, l and m in our formula, we now proceed to determine the variable value n, which designates the degree of roughness of the wet perimeter. We wish to remark, however, that by this expression we understand not only the mere roughness of the surface, but also the irregularities and imperfections (Schadhaftigkeit) in the bed of the channel or river. For instance, in the case of river-beds covered with boulders and detritus (Geschieben) we must not overlook the fact that when the water is low, and in general when the material forming the bed is not in motion, there is much less resistance to the flow than when it is moved during floods. In the first case we might compare...
