Excerpt: .on early in cholera infantum that might lead to a suspicion of meningitis, but in meningitis the cerebral trouble is prominent at the beginning, while in cholera infantum the brain symptoms such as stupor and insensibility do not often appear before exhaustion. In meningitis the bowels are usually constipated. If they should be loose and accompanied with vomiting these symptoms are not so violent as cholera infantum. Prognosis.--True cholera infantum is a grave disease and of short duration. The patient will either die in a few days or get better. The percentage of mortality is large. Physicians, I 4 ORIGINAL COMMUNICATIONS.--HARWELL. 269 therefore, cannot be too careful in forming and expressing opinions as to the result. If we should arrest the vomiting, and the evacuations should become more consistent and less frequent, and no brain symptoms supervene, while the pulse is good and the...

### Reviews

*The publication is easy to read better to understand. It is written in basic words and phrases rather than hard to understand. You won't truly feel monotony at any time of your respective time (that's what catalogues are for about if you question me).*
